CanalPro™ CalciSeal

Calcium Silicate-Based

Bioceramic Root Canal Sealer

Flows freely. Adapts easily.

With its advanced bioactive chemistry, antimicrobial properties, and ultra-flowable consistency, **CanalPro CalciSeal** is formulated for predictable treatment and long-lasting success — no matter your obturation technique.

Outstanding sealing performance straight from the syringe.

Prefilled syringe with thin, flexible tip for controlled application

Low viscosity ensures tight seal in lateral canals

High alkalinity provides antimicrobial protection during setting

Excellent radiopacity for reliable imaging

Bioactive properties support periapical healing

Compatible with cold, warm, and single-cone obturation

The science behind **a stronger seal**

TECHNICAL SPECS

Moisture needed for curing	Yes
Composition	Calcium silicate compound, zirconium oxide, thickening agents
Chemical base	Calcium silicate
Bioactive	Yes
Forms hydroxyapatite crystals	Yes
ph level	12.5
Color	White
Recommended filling techniques	Warm, cold, or single-cone obturation
Setting time	**3.5 hours** *(at room temperature)* | **1.5 hours** *(at body temperature: 37°C)*
Film thickness	11.3 µm
Tip	25 gauge
Solubility	≤1.49 %
Dentin adhesion	2 – 3 MPa
Radiopacity	8.0 mm Al
Retreatable	Yes
Storage temperature	15 – 25° C

"CanalPro CalciSeal sets a high standard for modern endodontic sealers by combining excellent flow, accelerated setting, and bioactive chemistry with osteoinductive potential."

Dr. Luis Francisco Acero Penagos
Endodontist & Professor | Dallas

ORDERING INFO

WHAT'S INCLUDED		PART NO.
	**CanalPro CalciSeal Kit** • 1x CanalPro CalciSeal Syringe (2g) • 20x Disposable Tips	**60043033**
